Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs): Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://ipr.etsi.org).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by Joint Technical Committee (JTC) Broadcast of the European Broadcasting Union (EBU), Comité Européen de Normalisation ELECtrotechnique (CENELEC) and the European Telecommunications Standards Institute (ETSI).

**NOTE:** The EBU/ETSI JTC Broadcast was established in 1990 to co-ordinate the drafting of standards in the specific field of broadcasting and related fields. Since 1995 the JTC Broadcast became a tripartite body by including in the Memorandum of Understanding also CENELEC, which is responsible for the standardization of radio and television receivers. The EBU is a professional association of broadcasting organizations whose work includes the co-ordination of its members' activities in the technical, legal, programme-making and programme-exchange domains. The EBU has active members in about 60 countries in the European broadcasting area; its headquarters is in Geneva.

The Digital Video Broadcasting Project (DVB) is an industry-led consortium of broadcasters, manufacturers, network operators, software developers, regulatory bodies, content owners and others committed to designing global standards for the delivery of digital television and data services. DVB fosters market driven solutions that meet the needs and economic circumstances of broadcast industry stakeholders and consumers. DVB standards cover all aspects of digital television from transmission through interfacing, conditional access and interactivity for digital video, audio and data. The consortium came together in 1993 to provide global standardization, interoperability and future proof specifications.
1 Scope

The present document defines codes, and identifiers (also referred to as code points) used in DVB systems. These codes are allocated by the DVB Project Office at the request of potential service providers and once allocated, become part of EN 300 468 [i.1] by reference. Further details can be obtained by contacting DVB Services Sàrl.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the following terms and definitions apply:

**applicant**: organization which applies for an identifier under the regime of the present document

**application domain**: identifier namespace constituted by a specification other than the present document

**registrar**: organization who keeps a public register of DVB-SI identifiers and assigns new values to Applicants under the regime of the present document

NOTE: By default, the DVB Project Office is the only registrar for DVB-SI identifiers. The Project Office may however pass this task on to one or more third parties.

**registration domain**: identifier namespace constituted by the present document

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

**ACME**: Acme Corporation, a fictional company used in examples

**AIT**: Application Information Table

**ATM**: Asynchronous Transfer Mode

**BCG**: Broadband Content Guide

NOTE: See TS 102 539 [i.15].
CA          Conditional Access
CDS         Content Download Service

NOTE: See TS 102 539 [i.15].

CoD         Content on Demand

NOTE: See TS 102 034 [i.12].

CP          Copy Protection
CPCM        Content Protection Copy Management

NOTE: See TS 102 825 [i.31].

CPS         Content Protection System
DVB         Digital Video Broadcasting
DVB-CI      DVB Common Interface

NOTE: See EN 50221 [i.10].

4 Principles of registration

4.0 Requirements and process of registration

The present document defines the allocation of identifiers pertaining to different DVB specifications (e.g. MHP, SI, Data Broadcasting, etc.). It does not describe the detail or the template as to how this should be done. The aim of the present document is to provide assistance to those soliciting and allocating identifiers.

Each identifier has the following attributes:

1) It is defined in a DVB specification (e.g. DVB Service Information (EN 300 468 [i.1])).

2) It is either:
   a) a binary number represented by either its hexadecimal equivalent denoted by the prefix "0x", or its decimal equivalent;
   b) a string constant represented by its Unicode equivalent; or
   c) a combination of a binary number and a string constant.

3) It has a text description. It is the table of values and descriptions which is published on www.dvb.org.

4) It is allocated to an organization operating in the digital television space (e.g. ACME Digital Broadcasting, Inc.), or a grouping of such companies (e.g. an ACME - Association of Cable/MMDS Enterprises) or an institution acting in digital television, e.g. IEEE (Institute of Electrical and Electronic Engineers).

5) It may be allocated for a given region. For terrestrial broadcasting, this is typically a sovereign country; for satellite operations, this is typically a geographical region spanning many countries, but consistent with the footprint of the satellites owned by the operators.
The present document describes where to find definitions of each identifier, who to refer to when there are questions, templates for the allocations and rules governing them. In addition, and where appropriate, there are descriptions of best practice and some historical notes.

The DVB Project Office shall be the only Registrar entitled to accept applications and perform registrations under the regime of the present document, and within the application areas of the specifications listed in clause 2. The DVB Project Office shall maintain a public, on-line register of assigned identifiers to ease quick look-up of the current assignments.

**NOTE:** For practical reasons, the DVB Project Office may choose to delegate the operation and maintenance of the public, on-line register and the authority of receiving applications and performing registrations to one or more third parties.

### 4.1 Registration domain and application domains

The scope of the present document shall constitute a registration domain namespace. Referred to as the registration domain for short. All identifiers defined in the present document are assigned a name in the registration domain.

Other specification documents - as referenced by the present document - constitute their own application domain namespaces. Each of them referred to as an application domain for short. Different names may be used for referring to the identifiers defined in the present document, in these application domains.

For each of the identifiers defined in the present document, a sub-clause is provided, which lists the registration domain name, and application domain names used to refer to the respective identifier. This means that all the names listed for each identifier, refer to one and the same identifier. Consequently, all provisions made in the present document for the respective identifier, shall also apply to the application domains listed.

### 5 Service Information (DVB-SI) identifiers

#### 5.0 Scope

Clause 5 covers the identifiers defined in EN 300 468 [i.1].

#### 5.1 Bouquet_ID

##### 5.1.0 Bouquet_ID registration principles

Bouquet_ID values shall be allocated to broadcasters and network operators to identify bouquets within the application area of EN 300 468 [i.1], by insertion in the bouquet_id field.

##### 5.1.1 Bouquet_ID registration template

To register a Bouquet_ID, applicants shall supply at least the information labelled as "required" in the registration template below.

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bouquet Name</td>
<td>required</td>
<td>Name of the Bouquet (e.g. &quot;ACME Pay-TV Service&quot;)</td>
</tr>
<tr>
<td>Bouquet Country Code</td>
<td>required</td>
<td>Country code where the bouquet is unique (e.g. North America)</td>
</tr>
<tr>
<td>Bouquet Operator</td>
<td>required</td>
<td>Name of organization which operates Bouquet (e.g. &quot;ACME Pay-TV, Inc.&quot;)</td>
</tr>
<tr>
<td>Bouquet Legal Contact</td>
<td>required</td>
<td>Name and e-mail of authorized legal signatory of &quot;Bouquet Operator&quot;</td>
</tr>
<tr>
<td>Bouquet Technical Contact</td>
<td>required</td>
<td>Name and e-mail of technical contact of &quot;Bouquet Operator&quot;</td>
</tr>
<tr>
<td>Bouquet Notes</td>
<td>optional</td>
<td>Notes on the application, e.g. last revised and what revisions were made</td>
</tr>
</tbody>
</table>
5.1.2 Bouquet_ID allocation template

The scheme and values given in table 2 shall be used for the allocation of Bouquet_ID values.

<table>
<thead>
<tr>
<th>Bouquet_ID</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0x0000</td>
<td>Reserved</td>
</tr>
<tr>
<td>0x0001 to 0xFFFF</td>
<td>Reserved for general registration through the DVB Project Office (see <a href="http://www.dvbservices.com">http://www.dvbservices.com</a>)</td>
</tr>
</tbody>
</table>

5.1.3 Bouquet_ID domain names

Table 3 lists the names, under which the bouquet_id is used in different DVB specifications.

<table>
<thead>
<tr>
<th>Name</th>
<th>Domain</th>
<th>Description</th>
</tr>
</thead>
</table>
| bouquet_id  | DVB-SI | EN 300 468 [i.1]
             |        | TS 101 211 [i.2]                                    |
| bouquet_id  | DVB-DATA| EN 301 192 [i.3]                                    |
|             |        | TR 101 202 [i.4]                                    |
| bouquet_id  | DVB-TVA | TS 102 323 [i.11]                                   |
| bouquetId   | DVB-MHP | TS 101 812 [i.5]                                    |
|             |        | TS 102 727 [i.6]                                    |
|             |        | TS 102 809 [i.24]                                   |
|             |        | TS 102 728 [i.26]                                   |

5.2 CA_System_ID

5.2.0 CA_System_ID registration principles

CA_System_ID values shall be allocated to Conditional Access system vendors to identify CA systems within the application area of EN 300 468 [i.1], by insertion in the CA_system_id field.

5.2.1 CA_System_ID registration template

To register a CA_System_ID, applicants shall supply at least the information labelled as "required" in the registration template below.

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CA System Name</td>
<td>required</td>
<td>Name of the organization supplying Conditional Access services (e.g. “ACME CA Services, Inc.”)</td>
</tr>
<tr>
<td>CA System Legal Contact</td>
<td>required</td>
<td>Name and e-mail of authorized legal signatory of “CA System Name”</td>
</tr>
<tr>
<td>CA System Technical Contact</td>
<td>required</td>
<td>Name and e-mail of technical contact of “CA System Name”</td>
</tr>
<tr>
<td>CA System Notes</td>
<td>optional</td>
<td>Notes on the application, e.g. last revised and what revisions were made</td>
</tr>
</tbody>
</table>
5.2.2 CA_System_ID allocation template

The scheme and values given in table 5 shall be used for the allocation of CA_System_ID values.

### Table 5: CA_System_ID allocation template

<table>
<thead>
<tr>
<th>CA_System_ID</th>
<th>CA system specifier</th>
</tr>
</thead>
<tbody>
<tr>
<td>0x0000</td>
<td>Reserved</td>
</tr>
<tr>
<td>0x0001 to 0x0FF</td>
<td>Reserved for registration to standardized systems through the DVB Project Office (see <a href="http://www.dvbservices.com">http://www.dvbservices.com</a>)</td>
</tr>
<tr>
<td>0x0100 to 0xFFFF</td>
<td>Reserved for general registration through the DVB Project Office (see <a href="http://www.dvbservices.com">http://www.dvbservices.com</a>)</td>
</tr>
</tbody>
</table>

In the standardized systems registration range, allocations shall only be made for Conditional Access systems which are defined and/or adopted as such by DVB, and which are fully described in a publicly available document from a recognized standardization body.

In the general registration range, allocations shall only be made to bona fide Conditional Access system vendors. Applicants need to demonstrate that the vendor is proposing a registration for a legitimate Conditional Access product.

5.2.3 CA_System_ID domain names

Table 6 lists the names, under which the CA_System_ID is used in different DVB specifications.

### Table 6: CA_System_ID domain names

</tbody>
</table>

5.3 CP_System_ID

5.3.0 CP_System_ID registration principles

CP_System_ID values shall be allocated to identify Copy Protection (CP) systems to which DVB-CPCM content will be exported within the application area of EN 300 468 [i.1], by insertion in the field CP_system_id.

5.3.1 CP_System_ID registration template

To register a CP_System_ID, applicants shall supply at least the information labelled as "required" in the registration template below.

### Table 7: CP_System_ID registration template

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CP System Description</td>
<td>required</td>
<td>Name of a Content Protection System (e.g. &quot;ACME Content Safe 1.0&quot;)</td>
</tr>
<tr>
<td>CP System Specifier</td>
<td>required</td>
<td>Name of the organization supplying the CPS (e.g. &quot;ACME CPS Consortium&quot;)</td>
</tr>
<tr>
<td>CP System Legal Contact</td>
<td>required</td>
<td>Name and e-mail of authorized legal signatory of &quot;CP System Specifier&quot;</td>
</tr>
<tr>
<td>CP System Technical Contact</td>
<td>required</td>
<td>Name and e-mail of technical contact of &quot;CP System Specifier&quot;</td>
</tr>
<tr>
<td>CP System Notes</td>
<td>optional</td>
<td>Notes on the application, e.g. last revised and what revisions were made</td>
</tr>
</tbody>
</table>
5.3.2 CP_System_ID allocation template

The scheme and values given in table 8 shall be used for the allocation of CP_System_ID values.

<table>
<thead>
<tr>
<th>CP_System_ID</th>
<th>CP system specifier</th>
</tr>
</thead>
<tbody>
<tr>
<td>0x0000 to 0x00FF</td>
<td>Reserved for registration to systems defined by DVB</td>
</tr>
<tr>
<td>0x0000</td>
<td>DVB CPCM Content Licence</td>
</tr>
<tr>
<td>0x0001</td>
<td>DVB CPCM Auxiliary Data</td>
</tr>
<tr>
<td>0x0002</td>
<td>DVB CPCM Revocation List</td>
</tr>
<tr>
<td>0x0100 to 0xFFFF</td>
<td>Reserved for general registration through the DVB Project Office (see <a href="http://www.dvbservices.com">http://www.dvbservices.com</a>)</td>
</tr>
</tbody>
</table>

In the general registration range, allocations shall only be made to bona fide Copy Protection system vendors. Applicants need to demonstrate that the vendor is proposing a registration for a legitimate Copy Protection product.

5.3.3 CP_System_ID domain names

Table 9 lists the names, under which the CP_System_ID is used in different DVB specifications.

<table>
<thead>
<tr>
<th>Name</th>
<th>Domain</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CP_System_ID</td>
<td>Registration Domain</td>
<td>Constituted by the present document</td>
</tr>
<tr>
<td>CP_system_id</td>
<td>DVB-SI</td>
<td>EN 300 468 [i.1]</td>
</tr>
<tr>
<td></td>
<td></td>
<td>TS 101 211 [i.2]</td>
</tr>
</tbody>
</table>

5.4 Country Code

5.4.0 Country Code registration principles

Country Code values shall be allocated to geographical areas to identify groups of countries or parts of countries within the application area of EN 300 468 [i.1]. These are supplementary to ISO 3166-1 [i.7]. This identifier helps in defining geographical coverage of other identifiers.

5.4.1 Country Code registration template

To register a Country Code, applicants shall supply at least the information labelled as "required" in the registration template below.

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Geographical Area Name</td>
<td>required</td>
<td>Name of the geographical area (e.g. &quot;North America&quot;)</td>
</tr>
<tr>
<td>Geographical Area Legal Contact</td>
<td>required</td>
<td>Name and e-mail of authorized legal signatory of &quot;Geographical Area Name&quot;</td>
</tr>
<tr>
<td>Geographical Area Technical Contact</td>
<td>required</td>
<td>Name and e-mail of technical contact of &quot;Geographical Area Name&quot;</td>
</tr>
<tr>
<td>Geographical Area Notes</td>
<td>optional</td>
<td>Notes on the application, e.g. last revised and what revisions were made</td>
</tr>
</tbody>
</table>

5.4.2 Country Code allocation template

The scheme and values given in table 11 shall be used for the allocation of Country Code values.
Table 11: Country Code allocation template

<table>
<thead>
<tr>
<th>Country Code</th>
<th>Grouping</th>
</tr>
</thead>
<tbody>
<tr>
<td>000 to 899</td>
<td>Reserved for ISO 3166-1 [i.7] use</td>
</tr>
<tr>
<td>900 to 999</td>
<td>Reserved for registration through the DVB Project Office (see <a href="http://www.dvbservices.com">http://www.dvbservices.com</a>)</td>
</tr>
</tbody>
</table>

Since geographical areas are to be represented by this identifier, allocations of Country Code values shall only be made to bona fide organizations. Applicants need to demonstrate that they represent the geographical area in question in an appropriate way. Preferred Applicants for Country Code values are hence organizations known to be in agreement with the legal and regulatory authorities, and other determining organizations active in, or substantially affected by, the area for which a Country Code value is to be registered.

5.4.3 Country Code domain names

Table 12 lists the names, under which the Country Code is used in different DVB specifications.

Table 12: Country Code domain names

<table>
<thead>
<tr>
<th>Name</th>
<th>Domain</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Country Code</td>
<td>Registration Domain</td>
<td>Constituted by the present document</td>
</tr>
<tr>

<td>EN 300 468 [i.1]</td>
</tr>
<tr>
<td></td>
<td></td>
<td>TS 101 211 [i.2]</td>
</tr>
</tbody>
</table>

5.5 Encoding_Type_ID

5.5.0 Encoding_Type_ID registration principles

Encoding_Type_ID values shall be allocated to broadcasters, network operators and content producers to identify string encodings within the application area of EN 300 468 [i.1], by insertion in the field encoding_type_id in the second byte of the string.

5.5.1 Encoding_Type_ID registration template

To register an Encoding_Type_ID, applicants shall supply at least the information labelled as "required" in the registration template below.

Table 13: Encoding_Type_ID registration template

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>

<td>EN 300 468 [i.1]</td>
</tr>
<tr>
<td></td>
<td></td>
<td>TS 101 211 [i.2]</td>
</tr>
</tbody>
</table>

5.6 Network_ID

5.6.0 Network_ID registration principles

Network_ID values shall be allocated to broadcasters and network operators to identify networks within the application area of EN 300 468 [i.1], by insertion in the network_id field.

A network is defined as a collection of MPEG 2 Transport Stream (TS) multiplexes transmitted on a single delivery system, e.g. all digital channels on a specific cable system. Network_IDs are unique within the geographical region defined by the Country Code.

- For satellite networks, this is a region spanning many countries.
- For a cable network, this is a single country.
- For terrestrial networks, this is a single country also, but it is important that two adjacent countries shall not have the same block of Network IDs. Hence the concept of colour coding countries was introduced.

5.6.1 Network_ID registration template

To register a Network_ID, applicants shall supply at least the information labelled as "required" in the registration template below.

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network Type</td>
<td>required</td>
<td>Satellite, terrestrial or cable</td>
</tr>
<tr>
<td>Network Name</td>
<td>required</td>
<td>Name of the Network (e.g. &quot;ACME Cable&quot;)</td>
</tr>
<tr>
<td>Network Country Code</td>
<td>required</td>
<td>Country code where the network is unique (e.g. North America)</td>
</tr>
<tr>
<td>Network Operator</td>
<td>required</td>
<td>Name of organization which operates the network (e.g. &quot;ACME Pay-TV, Inc.&quot;)</td>
</tr>
<tr>
<td>Network Legal Contact</td>
<td>required</td>
<td>Name and e-mail of authorized legal signatory of &quot;Network Operator&quot;</td>
</tr>
<tr>
<td>Network Technical Contact</td>
<td>required</td>
<td>Name and e-mail of technical contact of &quot;Network Operator&quot;</td>
</tr>
<tr>
<td>Network Notes</td>
<td>optional</td>
<td>Notes on the application, e.g. last revised and what revisions were made</td>
</tr>
</tbody>
</table>

The rules for the allocation of Network_IDs are as follows:

1) Network_IDs will be allocated on a geographical basis such that no conflict of network ids occurs in any geographical region. (Satellite network ids will be unique world-wide).

2) Network_IDs are a scarce resource and their allocation is under responsibility of DVB. Application of multiple Network_IDs is subject to exhaustive verification and is discouraged.

3) 256 Network_ID values are reserved for private/temporary use. Their allocation is not subject of the present document.

4) Network_IDs will be allocated according to clause 5.6.2.

5) Network_IDs for the terrestrial delivery medium will be made available to the appropriate national telecommunications regulator and their allocation in each country is under responsibility of this regulator.
In order to avoid the uneconomical use of Network IDs, the values will be given in blocks of 256 values on a country by country basis. Non-allocated Network IDs will be kept reserved.

The allocation of terrestrial network ids shall be based on a 4-colour-map approach. Two blocks of 256 values are reserved for the eventual case of collision.

If 256 values are not sufficient for a country, a new block of 256 colours will be allocated. This block can be used by all countries with the same colour in the colour map.

NOTE: Due to the re-usable allocation of all types of Network_ID values (satellite, cable and terrestrial), no link between Network_ID and Original_Network_ID exists.

### 5.6.2 Network_ID allocation template

The scheme and values given in table 17 shall be used for the allocation of Network_ID values.

<table>
<thead>
<tr>
<th>Network_ID</th>

<tr>
<td></td>
<td></td>
<td>TS 102 728 [i.26]</td>
</tr>
</tbody>
</table>

5.7 Original_Network_ID

5.7.0 Original_Network_ID registration principles

Original_Network_ID values shall be allocated to broadcasters, network operators and content producers to uniquely identify networks within the application area of EN 300 468 [i.1], by insertion in the original_network_id field.

5.7.1 Original_Network_ID registration template

To register an Original_Network_ID, applicants shall supply at least the information labelled as "required" in the registration template below.

Table 19: Original_Network_ID registration template

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Original Network Name</td>
<td>required</td>
<td>Name of the Network (e.g. &quot;ACME TV&quot;)</td>
</tr>
<tr>
<td>Original Network Operator</td>
<td>required</td>
<td>Name of organization which operates network (e.g. &quot;ACME Broadcast Corp.&quot;)</td>
</tr>
<tr>
<td>Original Network Legal Contact</td>
<td>required</td>
<td>Name and e-mail of authorized legal signatory of &quot;Original Network Operator&quot;</td>
</tr>
<tr>
<td>Original Network Technical Contact</td>
<td>required</td>
<td>Name and e-mail of technical contact of &quot;Original Network Operator&quot;</td>
</tr>
<tr>
<td>Original Network Notes</td>
<td>optional</td>
<td>Notes on the application, e.g. last revised and what revisions were made</td>
</tr>
</tbody>
</table>

The rules for the allocation of Original_Network_IDs are as follows:

1) In principle only one Original_Network_ID should be assigned to each network operator, broadcaster or content producer.
2) Original_Network_IDs are a scarce resource and their allocation is under responsibility of DVB. Application of multiple Original_Network_IDs is subject to exhaustive verification and discouraged.
3) 256 Original_Network_ID values are reserved for private/temporary use. Their allocation is not subject of the present document.

Since terrestrial and cable networks have in most cases a clearly identified geographical region of validity, the re-usage of Network_IDs is possible. However, Original_Network_IDs shall be unique independent of geographical region, since they are used to uniquely identify the transport streams and services.

In terrestrial networks, however it is recommended that all operators within a country use the same Original_Network_ID. This implies that broadcasters and operators within a country would need to coordinate the allocation of transport_stream_ids and service_ids between them. The registrar is recommended to allocate
Original\_Network\_ID values for terrestrial operators on the basis of Country Code + 0x2000. This will help receivers to discriminate broadcasts from multiple countries in cases where the target region descriptor is not used.

Some examples on the use of Network\_ID and Original\_Network\_ID are given in annex A.

5.7.2 Original\_Network\_ID allocation template

The scheme and values given in table 20 shall be used for the allocation of Original\_Network\_ID values.

<table>
<thead>
<tr>
<th>Original_Network_ID</th>

|                      |          | TS 102 728 [i.26] |

5.8 Private\_Data\_Specifier\_ID

5.8.0 Private\_Data\_Specifier\_ID registration principles

Private\_Data\_Specifier\_ID values shall be allocated to broadcasters, manufacturers and network operators and content producers to identify private SI elements within the application area of EN 300 468 [i.1], by insertion in the private\_data\_specifier field.

5.8.1 Private\_Data\_Specifier\_ID registration template

To register a Private\_Data\_Specifier\_ID, applicants shall supply at least the information labelled as "required" in the registration template below.

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Private Data Specifier Organization</td>
<td>required</td>
<td>Name of the organization or organization which is responsible for the private codes (e.g. &quot;ACME, Inc.&quot;)</td>
</tr>
<tr>
<td>Private Data Specifier Legal Contact</td>
<td>required</td>
<td>Name and e-mail of authorized legal signatory of &quot;Private Data Specifier Organization&quot;</td>
</tr>
<tr>
<td>Private Data Specifier Contact</td>
<td>required</td>
<td>Name and e-mail of technical contact of &quot;Private Data Specifier Organization&quot;</td>
</tr>
<tr>
<td>Private Data Specifier Notes</td>
<td>optional</td>
<td>Notes on the application, e.g. last revised and what revisions were made</td>
</tr>
</tbody>
</table>
Since the Private_DataSpecifier_ID plays important roles in national broadcast regulations and service aggregation, being able correctly identify the origins of the private data is important. Hence, Private_DataSpecifier_ID values shall only be allocated to bona fide organizations for which there is a legal signatory.

5.8.2 Private_DataSpecifier_ID allocation template

The scheme and values given in table 23 shall be used for the allocation of Private_DataSpecifier_ID values.

<table>
<thead>
<tr>
<th>Private_DataSpecifier_ID</th>

5.9 URI_Linkage_Type

5.9.1 Introduction

To assist receivers in identifying resources obtainable via an IP network, an appropriate value of the URI_Linkage_Type is conveyed along with a URI.

5.9.2 URI_Linkage_Type registration template

To register a URI_Linkage_Type, applicants shall supply at least the information labelled as "required" in the registration template below.

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>URI Linkage Specification Name</td>
<td>required</td>
<td>Name of an Application System Specification (e.g. &quot;Hybrid Internet TV&quot;)</td>
</tr>
<tr>
<td>URI Linkage Specifier</td>
<td>required</td>
<td>Name of the organization specifying the &quot; URI Linkage Specification Name&quot; mentioned above (e.g. &quot;Hybrid TV Forum&quot;)</td>
</tr>
<tr>
<td>URI Linkage Legal Contact</td>
<td>required</td>
<td>Name and e-mail of authorized legal signatory of &quot; URI Linkage Specifier&quot;</td>
</tr>
<tr>
<td>URI Linkage Technical Contact</td>
<td>required</td>
<td>Name and e-mail of technical contact of &quot; URI Linkage Specifier&quot;</td>
</tr>
<tr>
<td>URI Linkage Notes</td>
<td>optional</td>
<td>Notes on the application, e.g. last revised and what revisions were made</td>
</tr>
</tbody>
</table>
5.9.3 URI_Linkage_Type allocation template

The scheme and values given in table 38 shall be used for the allocation of URI_Linkage_Type values.

<table>
<thead>
<tr>
<th>URI_Linkage_Type</th>
<th>URI linkage specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>0x00 to 0x5F</td>
<td>Reserved for registration to DVB specifications</td>
</tr>
<tr>
<td>0x00</td>
<td>Online SDT (OSDT) for CI Plus [i.9]</td>
</tr>
<tr>
<td>0x01</td>
<td>DVB-IPTV SD&amp;S [60]</td>
</tr>
<tr>
<td>0x02</td>
<td>Material Resolution Server (MRS) for companion screen applications [i.10]</td>
</tr>
<tr>
<td>0x60 to 0x7F</td>
<td>Reserved for registration to standardised systems through the DVB Project Office (see <a href="http://www.dvbservices.com">http://www.dvbservices.com</a>)</td>
</tr>
<tr>
<td>0x80 to 0xFF</td>
<td>user defined</td>
</tr>
</tbody>
</table>

In the standardized systems registration range, allocations shall only be made for standardised systems which are fully described in a publicly available document from a standardisation body recognised by DVB. Separate allocations for different versions of the same standardised system specification shall only be made if and when a receiver would otherwise not be able to detect the version used from the contents of the standardised system streams themselves. Standardised system specifiers should thus design their specifications such that receivers can detect the version used without the use of separate URI_Linkage_Type values.

5.9.4 URI_Linkage_Type domain names

Table 39 lists the names, under which the URI_Linkage_Type is used in different DVB specifications.

<table>
<thead>
<tr>

</table>

6 Data Broadcast (DVB-DATA) identifiers

6.0 Scope

Clause 6 covers the identifiers defined in EN 301 192 [i.3].

6.1 Data_Broadcast_ID

6.1.0 Data_Broadcast_ID registration principles

Data_Broadcast_ID values shall be allocated to broadcasters, Conditional Access vendors, middleware vendors and other standardization bodies to identify the types of Data Broadcast services within the application area of EN 300 468 [i.1], by insertion in the field data_broadcast_id.
6.1.1 Data_Broadcast_ID registration template

To register a Data_Broadcast_ID, applicants shall supply at least the information labelled as "required" in the registration template below.

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data Broadcast Specification Name</td>
<td>required</td>
<td>Name of a Data Broadcast Specification (e.g. &quot;ACMEcast 1.0&quot;)</td>
</tr>
<tr>
<td>Data Broadcast Specifier</td>
<td>required</td>
<td>Name of the organization specifying the &quot;Data Broadcast Specification Name&quot; mentioned above (e.g. &quot;ACMEcast, Inc.&quot;)</td>
</tr>
<tr>
<td>Data Broadcast Legal Contact</td>
<td>required</td>
<td>Name and e-mail of authorized legal signatory of &quot;Data Broadcast Specifier&quot;</td>
</tr>
<tr>
<td>Data Broadcast Technical Contact</td>
<td>required</td>

</tr>
<tr>
<td>0xFFF</td>
<td>Reserved for future use</td>
</tr>
</tbody>
</table>

NOTE: See clauses "4.2.6.4 Data broadcast id descriptor" and "4.2.7.3 Data broadcast descriptor" of [i.2].

In the general registration range separate allocations for different versions of the same data broadcast specification shall only be made if and when a receiver would otherwise not be able to detect the version used from the contents of the data broadcast streams themselves or from private data carried in DVB-SI descriptors bearing a data_broadcast_id field. Data broadcast specifiers should thus design their specifications such that receivers can detect the version used without the use of separate Data_Broadcast_ID values.
6.1.3 Data_Broadcast_ID domain names

Table 30 lists the names, under which the Data_Broadcast_ID is used in different DVB specifications.

6.2 Platform_ID

6.2.0 Platform_ID registration principles

Platform_ID values shall be allocated to network operators and IPDC platform operators to uniquely identify the IP/MAC platform in use which is defined in EN 301 192 [i.3], by insertion in the platform_id field.

6.2.1 Platform_ID registration template

To register a Platform_ID, applicants shall supply at least the information labelled as "required" in the registration template below.

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Platform Name</td>
<td>required</td>
<td>Name of the IP/MAC Platform (e.g. &quot;ACME MobileTV&quot;).</td>
</tr>
<tr>

</table>

7 Generic Stream Encapsulation (DVB-GSE) identifiers

7.0 Scope

Clause 7 covers the identifiers defined in TS 102 606-1 [i.8].

7.1 Protocol_Type_ID

7.1.0 Introduction

The DVB-S2, -T2 and -C2 physical layers provide Generic Stream modes for conveying arbitrary, variable length payload frames. To identify the type of payload frames, a field in the header of these physical layers is used. For example, in the case of DVB-S2 and DVB-T2, the SYNC field is used. Further details about the fields used can be found in [i.8].

7.1.1 Protocol_Type_ID registration template

To register a Protocol_Type_ID, applicants shall supply at least the information labelled as “required” in the registration template below.

Table 34: Protocol_Type_ID registration template

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>

7.2 Application_System_ID

7.2.0 Introduction

To assist receivers in optimizing service discovery, the GSE Logical Link Control [i.9] information can indicate the application system type used on top of IP by conveying an appropriate value of the Application_System_ID.

7.2.1 Application_System_ID registration template

To register an Application_System_ID, applicants shall supply at least the information labelled as "required" in the registration template below.

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Application System Specification</td>
<td>required</td>
<td>Name of an Application System Specification (e.g. &quot;ACME Internet TV 1.0&quot;)</td>
</tr>
<tr>
<td>Name</td>
<td></td>
<td></td>
</tr>
<tr>

</tr>
<tr>
<td>Application System Technical Contact</td>
<td>required</td>
<td>Name and e-mail of technical contact of &quot;Application System Specifier&quot;</td>
</tr>
<tr>
<td>Application System Notes</td>
<td>optional</td>
<td>Notes on the application, e.g. last revised and what revisions were made</td>
</tr>
</tbody>
</table>

7.2.2 Application_System_ID allocation template

The scheme and values given in table 38 shall be used for the allocation of Data_Broadcast_ID values.

<table>
<thead>
<tr>
<th>Application_System_ID</th>
<th>Data broadcast specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>0x0000 to 0x001F</td>
<td>Reserved for registration to DVB specifications</td>
</tr>
<tr>
<td>0x0020 to 0xFFFF</td>
<td>Reserved for registration to standardized systems through the DVB Project Office (see <a href="http://www.dvbservices.com">http://www.dvbservices.com</a>)</td>
</tr>
<tr>
<td>0x8000 to 0xFFFF</td>
<td>Reserved for general registration through the DVB Project Office (see <a href="http://www.dvbservices.com">http://www.dvbservices.com</a>)</td>
</tr>
</tbody>
</table>

In the standardized systems registration range, allocations shall only be made for application systems which are defined and/or adopted as such by DVB, and which are fully described in a publicly available document from a recognized standardization body.

In the general registration range, separate allocations for different versions of the same application system specification shall only be made if and when a receiver would otherwise not be able to detect the version used from the contents of the application system streams themselves, or from private data carried in GSE LLC descriptors bearing an
application_system_id field. Application system specifiers should thus design their specifications such that receivers can detect the version used without the use of separate Application_System_ID values.

7.2.3 Application_System_ID domain names

Table 39 lists the names, under which the Application_System_ID is used in different DVB specifications.

</table>

8 Identifiers for Globally Executable MHP (GEM), Multimedia Home Platform (DVB-MHP), and other technologies

8.0 Scope

The Application Information Table (AIT) provides full information on the data broadcast, the required activation state of applications carried by it, etc. Although first used with MHP (TS 101 812 [i.5] and TS 102 727 [i.6]), the AIT is now used with other technologies including OCAP™ [i.20], MHEG-5 [i.25] and various specifications which use TS 102 809 [i.24], for example the Open IPTV Forum specifications [i.21], [i.22] and [i.23]. In many places in the present document, the identifiers retain MHP in the name to reflect their origins but this does not imply limitations on their use with other application types.

8.1 MHP_AIT_Descriptor

8.1.1 MHP_AIT_Descriptor registration template

To register an MHP_AIT_Descriptor, applicants shall supply at least the information labelled as "required" in the registration template below.

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>

8.2 MHP_Application_Type_ID

8.2.0 MHP_Application_Type_ID registration principles

The MHP_Application_Type_ID identifies the type of the applications described in an AIT sub-table, i.e. the engine or plug-in on which the applications can be executed. MHP_Application_Type_ID values shall be allocated to broadcasters, Conditional Access vendors, middleware vendors, and other standardization bodies to identify the types of interactive applications by insertion in the field application_type.
8.2.1 MHP_Application_Type_ID registration template

To register an MHP_Application_Type_ID, applicants shall supply at least the information labelled as "required" in the registration template below.

**Table 43: MHP_Application_Type_ID registration template**

<table>

8.3 MHP_Organisation_ID

8.3.0 MHP_Organisation_ID registration principles

The MHP_Organisation_ID globally and uniquely identifies an organization that is responsible for interactive applications. MHP_Organisation_ID values shall be allocated to broadcasters, Conditional Access vendors, middleware vendors, application publishers, and other standardization bodies to identify them as responsible for interactive applications by insertion in the field organisation_id.
8.3.1 MHP_Organisation_ID registration template

To register an MHP_Organisation_ID, applicants shall supply at least the information labelled as "required" in the registration template below.

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Organization Name</td>
<td>required</td>
<td>Name of the organization responsible for the interactive Applications (e.g. &quot;ACMEcast, Inc.&quot;)</td>
</tr>
<tr>
<td>Organization Legal Contact</td>
<td>required</td>
<td>Name and e-mail of authorized legal signatory of &quot;Organization Name&quot;</td>
</tr>
<tr>
<td>Organization Technical Contact</td>
<td>required</td>
<td>Name and e-mail of technical contact of &quot;Organization Name&quot;</td>
</tr>
<tr>
<td>Organization Notes</td>
<td>optional</td>
<td>Notes on the organization, e.g. legal successor for, or assignee to other Organization ID holder</td>
</tr>
</tbody>
</table>

8.3.2 MHP_Organisation_ID allocation template

The scheme and values given in table 47 shall be used for the allocation of MHP_Organisation_ID values.

<table>
<thead>
<tr>
<th>MHP_Organisation_ID</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0x00000000</td>
<td>Reserved</td>
</tr>
<tr>
<td>0x00000001 to 0xFFFFFFFF</td>
<td>Reserved for general registration through the DVB Project Office (see <a href="http://www.dvbservices.com">http://www.dvbservices.com</a>). These MHP_Organisation_ID values are globally unique.</td>
</tr>
</tbody>
</table>

8.3.3 MHP_Organisation_ID domain names

Table 48 lists the names, under which the MHP_Organisation_ID is used in different DVB specifications.

<table>
<thead>
<tr>
<th>Name</th>
<th>Domain</th>

</tbody>
</table>

8.4 MHP_Protocol_ID

8.4.0 MHP_Protocol_ID registration principles

The MHP_Protocol_ID identifies a protocol used for carrying interactive applications. MHP_Protocol_ID values shall be allocated to broadcasters, Conditional Access vendors, middleware vendors, and other standardization bodies to identify protocols for carrying interactive applications by insertion in the field protocol_id.

8.4.1 MHP_Protocol_ID registration template

To register an MHP_Protocol_ID, applicants shall supply at least the information labelled as "required" in the registration template below.
Table 49: MHP_Protocol_ID registration template

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Protocol Specification Name</td>
<td>required</td>
<td>Name of a Protocol Specification (e.g. &quot;ACMEcast 1.0&quot;)</td>

9 DVB services over bi-directional IP networks (DVB-IPTV) identifiers

9.1 Payload_ID

9.1.0 Introduction

For the transport of SD&S records, TS 102 034 [i.12] defines the DVBSTP protocol. The different types of SD&S information are distinguished by the Payload_ID field in the DVBSTP header.

9.1.1 Payload_ID registration template

Since no registration to organizations outside DVB is possible at this time, no registration template is given. Should the Payload_ID be opened up for public registration in the future, the required registration template will appear here.

9.1.2 Payload_ID allocation template

The scheme and values given in table 52 shall be used for the allocation of Payload_ID values.
Table 52: Payload_ID allocation template

<table>
<thead>
<tr>
<th>Payload_ID</th>

10 IP Datacast over DVB (DVB-IPDC) identifiers

10.1 IPDC_Operator_ID

10.1.0 IPDC_Operator_ID registration principles

An IPDC Operator is a network entity managing IPDC key streams. It is uniquely identified by a pair of two DVB identifiers:

- an IPDC_Operator_ID value; and
- a CA_System_ID value (see clause 5.2).

IPDC_Operator_ID values shall be allocated to IPDC operators to construct - under the scope of a CA_system_ID value - the unique identification of an IPDC operator [i.18].

For CA_system_ID values in the range of 0x0001 to 0x00FF (standardized CA systems), associated IPDC_Operator_ID values shall be registered through the DVB Project Office.

10.1.1 IPDC_Operator_ID registration template

To register an IPDC_Operator_ID, applicants shall supply at least the information labelled as "required" in the registration template below.
### Table 54: IPDC_Operator_ID registration template

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IPDC Operator ID Type</td>
<td>required</td>
<td>Type of the IPDC Operator ID to be registered, i.e. string or numerical</td>
</tr>
<tr>
<td>IPDC Operator CA System ID</td>
<td>required</td>
<td>The CA_System_id (see clause 5.2) which has already been registered to &quot;IPDC Operator Name&quot;, and under which the &quot;IPDC Operator ID&quot; will be used</td>
</tr>
<tr>
<td>IPDC Operator Name</td>
<td>required</td>
<td>Name of the organization supplying Conditional Access services (e.g. &quot;ACME Mobile Services, Inc.&quot;)</td>
</tr>
<tr>
<td>IPDC Operator Legal Contact</td>
<td>required</td>
<td>Name and e-mail of authorized legal signatory of &quot;IPDC Operator Name&quot;</td>
</tr>
<tr>
<td>IPDC Operator Technical Contact</td>
<td>required</td>
<td>Name and e-mail of technical contact of &quot;IPDC Operator Name&quot;</td>
</tr>
<tr>
<td>IPDC Operator Notes</td>
<td>optional</td>
<td>Notes on the application, e.g. last revised and what revisions were made</td>
</tr>
</tbody>
</table>

**NOTE:** For historical reasons, the IPDCOperatorId value actually used in IPDC signalling can either be a numerical value or a string value, depending on the CA system with which it is associated (e.g. IPDC SPP Open Security Framework is traditionally associated with IPDCOperatorId numerical values, whereas IPDC SPP 18Crypt is traditionally associated with IPDCOperatorId string values).

When a string ID is to be registered, it shall be a unique text string compliant with one of the two XML built-in data types "string" or "anyURI".

#### 10.1.2 IPDC_Operator_ID allocation template

The scheme and values given in table 55 shall be used for the allocation of IPDC_Operator_ID values.

**Table 55: Numerical IPDC_Operator_ID allocation template**

<table>
<thead>
<tr>
<th>IPDC_Operator_ID</th>

<td></td>
<td></td>
<td>TS 102 474 [i.19]</td>
</tr>
</tbody>
</table>

#### 10.2 IPDC_Notification_Type

**10.2.0 IPDC_Notification_Type registration principles**

IPDC Notification is a function by which the network provides messages about forthcoming and not predictable events of interest to the terminal or the user. An IPDC Notification may lead to subsequent interaction from the user/the terminal. The information carried in the notification messages can be related to the (DVB) network supporting the IPDC system, the IP platform, or the services described in a given ESG.

Static, standardized IPDC_Notification_Type values shall be allocated to broadcasters, Conditional Access vendors, middleware vendors, and other standardization bodies to identify the types of Notification message targeting an IPDC Notification application in the terminal or in the smartcard within the application area of TS 102 832 [i.17], by insertion in the field NotificationType. Allocations shall only be made for Notification Types which are fully described in a publicly available document from a recognized standardization body.
10.2.1 IPDC_Notification_Type registration template

To register an IPDC_Notification_Type, applicants shall supply at least the information labelled as "required" in the registration template below.

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IPDC Notification Type MIME Type</td>
<td>required</td>
<td>MIME type of the application-specific message part</td>
</tr>
<tr>
<td>IPDC Notification Type Specification Name</td>
<td>required</td>
<td>Name of a IPDC Notification Type Specification (e.g. &quot;ACME InfoServ 1.0&quot;)</td>
</tr>
<tr>
<td>IPDC Notification Type Specifier</td>
<td>required</td>
<td>Name of the organization specifying the &quot;IPDC Notification Type Specification Name&quot; mentioned above (e.g. &quot;ACMEcast, Inc.&quot;)</td>
</tr>
<tr>
<td>IPDC Notification Legal Contact</td>
<td>required</td>
<td>Name and e-mail of authorized legal signatory of &quot;IPDC Notification Type Specifier&quot;</td>
</tr>
<tr>
<td>IPDC Notification Type Technical Contact</td>
<td>required</td>
<td>Name and e-mail of technical contact of &quot;IPDC Notification Type Specifier&quot;</td>
</tr>
<tr>
<td>IPDC Notification Type Notes</td>
<td>optional</td>
<td>Notes on the application type, e.g. last revised and what revisions were made</td>
</tr>
</tbody>
</table>

10.2.2 IPDC_Notification_Type allocation template

The scheme and values given in table 58 shall be used for the allocation of IPDC_Notification_Type values.

<table>
<thead>
<tr>
<th>IPDC_Notification_Type</th>
<th>MIME Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0x0000 to 0x00FF</td>
<td>Reserved</td>
<td>Reserved for registration to standardized applications through the DVB Project Office (see <a href="http://www.dvbservices.com">http://www.dvbservices.com</a>)</td>
</tr>
<tr>
<td>0x0000</td>
<td>text/xml</td>
<td>Reserved for specific IPDC signalling</td>
</tr>
<tr>
<td>0x0001</td>
<td>application/octet-stream</td>
<td>Notification application inside the smartcard, invoked by the OMA Smart Card Web Server</td>
</tr>
<tr>
<td>0x0100 to 0xFFFF</td>
<td>User defined</td>
<td>(dynamically assigned in the scope of an IP platform)</td>
</tr>
</tbody>
</table>

10.2.3 IPDC_Notification_Type domain names

Table 59 lists the names, under which the IPDC_Notification_Type is used in different DVB specifications.

<table>
<thead>
<tr>
<th>Name</th>
<th>Domain</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NotificationType</td>
<td>DVB-IPDC</td>
<td>TS 102 832 [i.17]</td>
</tr>
<tr>

<td></td>
<td>TS 102 611-1 [i.18]</td>
</tr>
<tr>
<td></td>
<td></td>
<td>TS 102 474 [i.19]</td>
</tr>
</tbody>
</table>

10.3 Root_of_Trust_ID

10.3.0 Root_of_Trust_ID registration principles

The 18Crypt profile of DVB-IPDC Service Purchase and Protection (SPP) uses a public-key infrastructure (PKI) to manage authorization, authentication, data integrity, and certificate revocations. The Root_of_Trust_ID globally and uniquely identifies a trust-centre organization that is responsible for issuing and managing certificates [i.19]. Root_of_Trust_ID values shall be allocated only to bona fide trust-centre organizations. Applicants need to demonstrate that the vendor is proposing a registration for a legitimate Root-of-Trust product.
10.3.1 Root_of_Trust_ID registration template

To register a Root_of_Trust_ID, applicants shall supply at least the information labelled as "required" in the registration template below.

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Root of Trust Name</td>
<td>required</td>
<td>Name of the organization supplying trust-centre services (e.g. &quot;ACME Trust Centre, Inc.&quot;)</td>
</tr>
<tr>
<td>Root of Trust Legal Contact</td>
<td>required</td>
<td>Name and e-mail of authorized legal signatory of &quot;Root of Trust Name&quot;</td>
</tr>
<tr>
<td>Root of Trust Technical Contact</td>
<td>required</td>
<td>Name and e-mail of technical contact of &quot;Root of Trust Name&quot;</td>
</tr>
<tr>
<td>Root of Trust Notes</td>
<td>optional</td>
<td>Notes on the application, e.g. last revised and what revisions were made</td>
</tr>
</tbody>
</table>

10.3.2 Root_of_Trust_ID allocation template

The scheme and values given in table 61 shall be used for the allocation of Root_of_Trust_ID values.

<table>
<thead>
<tr>
<th>Root_of_Trust_ID</th>
<th>CA system specifier</th>
</tr>
</thead>
<tbody>
<tr>
<td>000 to 001</td>
<td>Reserved for registration to systems defined by DVB</td>
</tr>
<tr>
<td>002 to 999</td>
<td>Reserved for general registration through the DVB Project Office (see <a href="http://www.dvbservices.com">http://www.dvbservices.com</a>)</td>
</tr>
</tbody>
</table>

10.3.3 Root_of_Trust_ID domain names

Table 62 lists the names, under which the Root_of_Trust_ID is used in different DVB specifications.

<table>

11 Identifiers for TV-Anytime over DVB (DVB-TVA) and other technologies

11.0 Scope

Clause 11 covers the identifiers defined in TS 102 323 [i.11], TS 102 823 [i.29] and ISO/IEC 13818-1 [i.28].

11.1 Metadata_Application_Format

11.1.0 Introduction

The Metadata_Application_Format specifies the application responsible for defining usage, syntax and semantics of various metadata elements.

11.1.1 Metadata_Application_Format registration template

To register a Metadata_Application_Format, applicants shall supply at least the information labelled as "required" in the registration template below.
Table 63: Metadata_Application_Format registration template

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>

12 Common Interface (DVB-CI) identifiers

12.0 Scope

Clause 12 covers the identifiers defined in TS 101 699 [i.30].

12.1 Registration_Authority_ID

12.1.0 Registration_Authority_ID registration principles

The Registration_Authority_ID identifies the authority that allocates private_resource_definer values (see clause 12.2) to applicants. This identifier is managed by ETSI. It allows ETSI to delegate authority for managing parts of the range of private_resource_definer values to other registration authorities.
12.1.1 Registration_Authority_ID registration template

Since no registration to organizations outside ETSI is possible at this time, no registration template is given. Should the Registration_Authority_ID be opened up for public registration in the future, the required registration template will appear here.

12.1.2 Registration_Authority_ID allocation template

The scheme and values given in table 66 shall be used for the allocation of Registration_Authority_ID values.

<table>
<thead>
<tr>
<th>Registration_Authority_ID</th>
<th>Registration Authority</th>

13 DVB Extensions to CI Plus™ (DVB-CI-Plus) identifiers

13.1 Scope

Clause 13 covers the identifiers defined in TS 103 205 [i.37].

13.2 CC_System_ID

13.2.1 Introduction

The CC_System_ID identifies the Content Control system used for content control for a particular instance of the interface. It is defined in CI Plus [i.36] and its usage is clarified in TS 103 205 [i.37].

Content Control systems often use public-key infrastructures (PKI) to manage authorization, authentication, data integrity, and certificate revocations. If and when this is the case, a registered CC_System_ID value is also implicitly associated with the root-of-trust of the respective PKI.

13.2.2 CC_System_ID registration principles

CC_System_ID values shall be allocated only to bona fide organizations. Applicants need to demonstrate that the vendor is proposing a registration for a legitimate content control product.

13.2.3 CC_System_ID registration template

To register a CC_System_ID, applicants shall supply at least the information labelled as "required" in the registration template given in table 71.
Table 71: CC_System_ID registration template

<table>
<thead>
<tr>
<th>Registration field</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CC System Name</td>
<td>required</td>
<td>Name for the CC system.</td>
</tr>
<tr>
<td>CC System Specifier</td>
<td>required</td>
<td>Name of the organization which is responsible for the CC system.</td>
</tr>
<tr>
<td>CC System Legal Contact</td>
<td>required</td>
<td>Name and e-mail of authorized legal signatory of &quot;CC System Name&quot;.</td>
</tr>
<tr>
<td>CC System Technical Contact</td>
<td>required</td>
<td>Name and e-mail of technical contact of &quot;CC System Name&quot;.</td>
</tr>
<tr>
<td>CC System Notes</td>
<td>optional</td>
<td>Notes on the application, e.g. last revised and what revisions were made.</td>
</tr>
</tbody>
</table>

13.2.4 CC_System_ID allocation template

The scheme and values given in table 72 shall be used for the allocation of CC_System_ID values.

Table 72: CC_System_ID allocation template

<table>
<thead>
<tr>
<th>CC_System_ID</th>
<th>Bit of cc_system_id_bit mask</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>b₀</td>
<td>Allocated for the CI Plus LLP PKI as defined in CI Plus Specification 1.3 [i.38] (CI Plus Root of Trust).</td>
</tr>
<tr>
<td>2</td>
<td>b₁</td>
<td>Allocated for the CI Plus LLP PKI as defined in CI Plus Specification 1.4 [i.39] (CI Plus 2nd Root of Trust).</td>
</tr>
<tr>
<td>3 to 7</td>
<td>b₂ to b₆</td>
<td>Reserved for registration through the DVB Project Office (see <a href="http://www.dvbservices.com">http://www.dvbservices.com</a>).</td>
</tr>
<tr>
<td>n/a</td>
<td>b₇</td>
<td>Reserved for a future extension mechanism for additional CC_System_IDs.</td>
</tr>
</tbody>
</table>

13.2.5 CC_System_ID domain names

Table 73 lists the names, under which the CC_System_ID is used in different DVB specifications.

Table 73: CC_System_ID domain names

</table>
Annex A (informative):
Example Scenarios for the Utilization of network_id and original_network_id

A.1 Re-transmission of a satellite signal in terrestrial networks

A service operator A-TV transmits his transport stream to satellite X-SAT. The signal is re-transmitted by the terrestrial network A-NET in country A with modifications to the content. The signal is re-transmitted by the terrestrial network in country B without modifications to the content:

- A-TV has the unique original_network_id 0x1234.
- Another television network B-TV (original_network_id = 0x5678) is using the same satellite for the contribution to A-Net in country A and to B-Net in country B.
- The original_network_id of a DVB-T network is likely to have been allocated for the country according to clause 5.7. The originating service operator and its original_network_id in this case do not occur in the NIT of terrestrial networks.
- X-SAT has the network_id 0x0200 (in range of unique satellite networks).
- A-NET and B-Net share the re-usable terrestrial network_id range of 0x3300 to 0x334F.

The satellite NIT contains the original_network_id of A-TV and the network_id of X-SAT.
On the terrestrial network the original_network_id has always the value that has been allocated for a certain country as defined in clause 5.6. The network_id is replaced by one of the network_ids of country A that could be re-used in country B if it has the same colour in the colour-map.

A.2 Re-transmission of a satellite signal in cable networks

The same scheme as above applies. Cable networks generally use re-usable network_ids because there is no risk that IRDs are connected to two cable networks sharing the same network_id at the same time.

The satellite serves different cable networks in L-Town and in E-Town. They can use the same network_id because they are physically separated.

A special case is the transmission of cable network NITs as "foreign" NITs on a satellite. In this case the cable network_ids have to be in the unique range of values since a collision on other networks using the same re-usable network_id cannot be guaranteed. Note that this method is not recommended since the number of unique network_ids is limited.
